

Cow Pen Slough Condition Report for 2011

✓

PASS

4 out of 4 indicators were rated as **PASS**.

Chl-a N P DO

All four indicators must pass for the creek to be rated as **PASS**.

Size: 47,518 acres

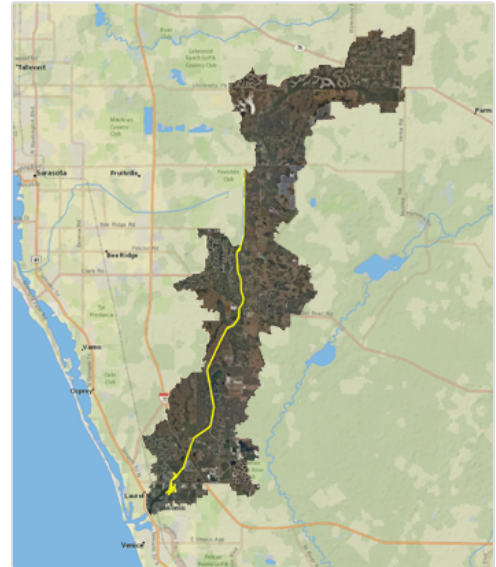

Location: North and central Sarasota County, south Manatee County

Discharges into: Dona Bay

For more information, please see: **Cow Pen Slough Basin Master Plan (USDA Report, 1997)**

Cow Pen Slough

Water Chemistry Ratings | Freshwater Portion of the Creek

Creek Conditions Ratings are based on comparing nitrogen, phosphorus, chlorophyll and dissolved oxygen to water quality guidelines or regulations. Florida law defines a maximum allowable concentration of nitrogen, phosphorus, and chlorophyll *a*, and a minimum allowable concentration of dissolved oxygen in these streams.

Chlorophyll a

Score: Pass

Units: mg/l	Year 2011	Historical period of record
High	0.059	0.243
Mean	0.0091	0.0111
Low	0.0024	0.0006
No. of Samples	108	373

Five-year Rolling Average

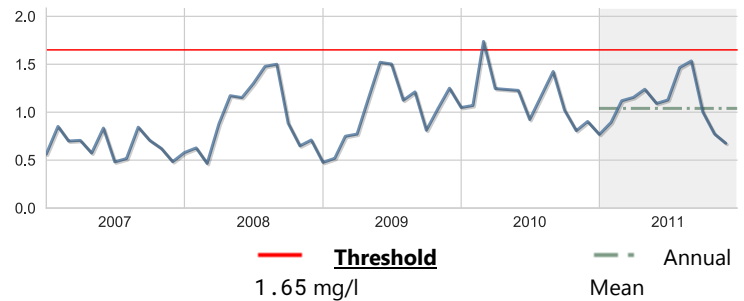

Nitrogen, Total

Score: Pass

Units: mg/l	Year 2011	Historical period of record
High	1.904	2.73
Mean	1.0398	0.9729
Low	0.636	0.15
No. of Samples	36	291

Five-year Rolling Average

Phosphorus, Total

Score: Pass

Units: mg/l	Year 2011	Historical period of record
High	0.711	1.19
Mean	0.2135	0.193
Low	0.055	0.02
No. of Samples	108	427

Five-year Rolling Average

Dissolved Oxygen Saturation

Note: Low DO saturation also may be naturally influenced by inflows from nearby wetlands or groundwater sources.

Score: Pass

Units: percent (%)	Year 2011	Historical period of record
High	139.2253	227.16
Mean	70.92	73.67
Low	35.436	2.381
No. of Samples	120	657

Five-year Rolling Average

BOD, Biochemical oxygen demand

Units: mg/l	Year 2011	Historical period of record
High	10.60	13.90
Mean	1.62	1.8
Low	0.50	0.00
No. of Samples	108	393

Color

Units: PCU	Year 2011	Historical period of record
High		650.00
Mean		85.82
Low		10.00
No. of Samples	0	274

Escherichia coli

Units: cfu/100ml	Year 2011	Historical period of record
High		230.00
Mean		117.47
Low		60.00
No. of Samples	0	2

Nitrogen, Ammonia + Ammonium as N

Units: ug/l	Year 2011	Historical period of record
High	402.00	605.00
Mean	74.13	16.37
Low	8.00	0.00
No. of Samples	108	524

Nitrogen, Kjeldahl

Units: ug/l	Year 2011	Historical period of record
High	1750.00	8400.00
Mean	1000.48	995.83
Low	619.00	0.00
No. of Samples	108	511

Nitrogen, Nitrite + Nitrate as N

Units: ug/l	Year 2011	Historical period of record
High	154.00	2210.00
Mean	25.08	19.92
Low	4.00	0.00
No. of Samples	108	436

pH

Units: None	Year 2011	Historical period of record
High	8.44	11.50
Mean	7.3	7.6
Low	5.99	5.80
No. of Samples	45	3,741

Specific Conductance

Units: umho	Year 2011	Historical period of record
High	48559.00	59844.40
Mean	2841.36	20037.37
Low	650.00	0.512
No. of Samples	45	3,793

Temperature, water

Units: deg F	Year 2011	Historical period of record
High	88.016	92.426
Mean	74.55	77.51
Low	62.726	47.372
No. of Samples	30	3,610

Water Chemistry Ratings | Tidal Portion of the Creek

Creek Conditions Ratings are based on comparing nitrogen, phosphorus, chlorophyll and dissolved oxygen to water quality guidelines or regulations. Florida law defines a maximum allowable concentration of chlorophyll *a* and a minimum allowable concentration of dissolved oxygen in these streams. Florida has no regulatory thresholds for nitrogen or phosphorus in tidal creeks so trends are used to rate the creeks.

Chlorophyll a

Units: mg/l	Year 2011	Historical period of record
High		0.0
Mean		0.0104
Low		0.004
No. of Samples	0	15

Nitrogen, Total

Units: mg/l	Year 2011	Historical period of record
High		2.2
Mean		1.0972
Low		0.16
No. of Samples	0	42

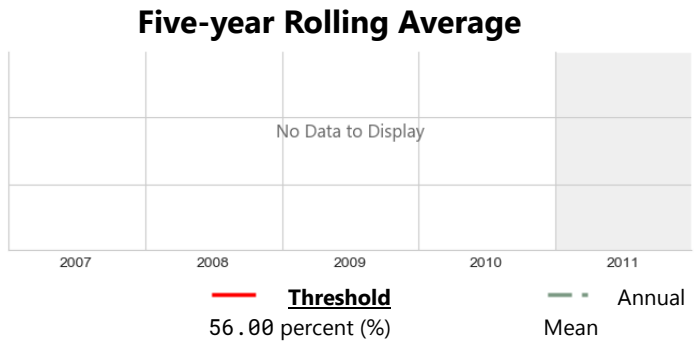

Phosphorus, Total

Units: mg/l	Year 2011	Historical period of record
High		0.6
Mean		0.1913

Mean		14280.55
Low		19.00
No. of Samples	0	335

Temperature, water

Units: deg F	Year 2011	Historical period of record
High		93.2
Mean		75.64
Low		51.80
No. of Samples	0	248

Impervious Features

Rain that falls on land that is in a natural state is absorbed and filtered by soils and vegetation as it makes its way into underground aquifers. However, in developed areas, "impervious surfaces" impede this process and contribute to polluted urban runoff entering surface waters. These surfaces include human infrastructure like roads, sidewalks, driveways and parking lots that are covered by impenetrable materials such as asphalt, concrete, brick and stone, as well as buildings and other permanent structures. Soils that have been disturbed and compacted by urban development are often impervious as well.

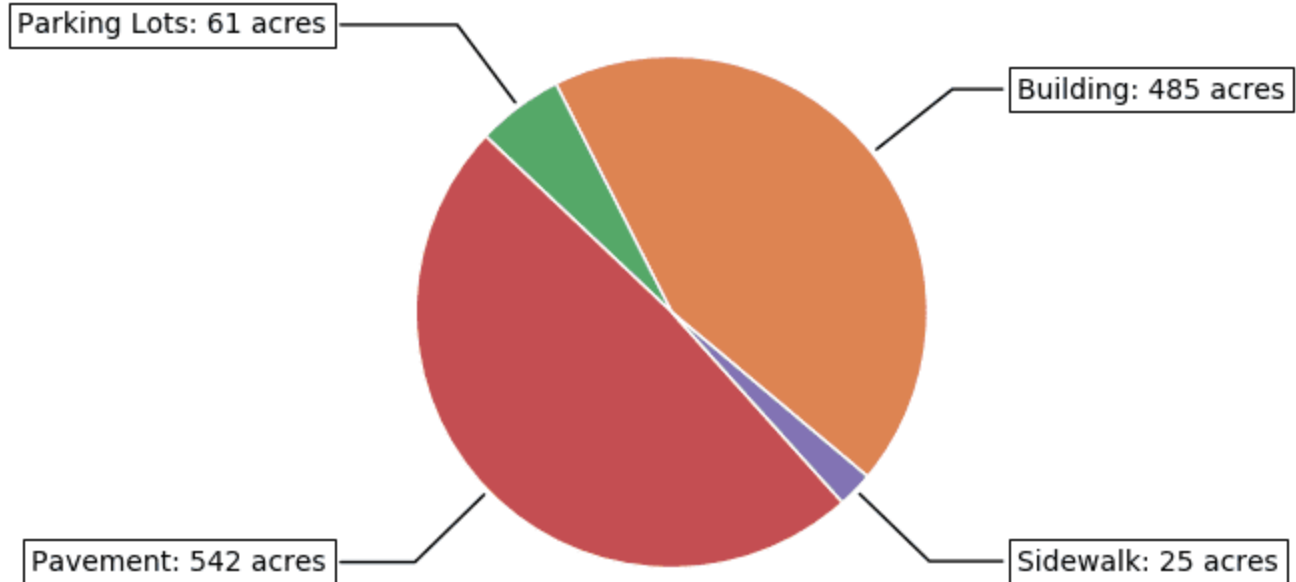

2% of the land area within the **Cow Pen Slough Basin** is covered by impervious

surfaces

2014 Impervious Surface Coverage by Type

in acres, within the Cow Pen Slough Basin

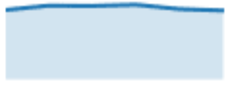

Land Use / Land Cover

Land use within a creek's watershed has a major effect on its water quality. In general, less development means better water quality. Land Cover/Land Use classifications categorize land in terms of its observed physical surface characteristics (e.g. upland or wetland), and also reflect the types of activity that are taking place on it (agriculture, urban/built-up, utilities, etc.). Florida uses as its standard a set of statewide classifications which were developed by the Florida Department of Transportation.

Acreage and Percentage within each Land Use / Land Cover Category for Cow Pen Slough Basin

2011 Creek Conditions Report for Cow Pen Slough

Land Use Classification	1990	1995	1999	2005	2011	2014	Trend
