4 out of 4 indicators were rated as **PASS**.

All four indicators must pass for the creek to be rated as **PASS**.

**Size:** 1,724 acres  
**Location:** Central Sarasota County  
**Discharges into:** Little Sarasota Bay

### Matheny Creek

### Water Chemistry Ratings | Freshwater Portion of the Creek

Creek Conditions Ratings are based on comparing nitrogen, phosphorus, chlorophyll and dissolved oxygen to water quality guidelines or regulations. Florida law defines a maximum allowable concentration of nitrogen, phosphorus, and chlorophyll *a*, and a minimum allowable concentration of dissolved oxygen in these streams.

## Chlorophyll a

Score: Pass

Units: mg/l	Year 2022	Historical period of record
<b>High</b>	0.0152	0.10
<b>Mean</b>	0.0028	0.0028
<b>Low</b>	0.0009	0.0005
<b>No. of Samples</b>	24	594

### Five-year Rolling Average

## Nitrogen, Total

Score: Pass

Units: mg/l	Year 2022	Historical period of record
<b>High</b>	3.868	3.868
<b>Mean</b>	1.0609	0.7574
<b>Low</b>	0.60	0.0017
<b>No. of Samples</b>	24	437

### Five-year Rolling Average

## Phosphorus, Total

Score: Pass

Units: mg/l	Year 2022	Historical period of record
<b>High</b>	1.10	1.78

## Water Chemistry Ratings | Tidal Portion of the Creek

Creek Conditions Ratings are based on comparing nitrogen, phosphorus, chlorophyll and dissolved oxygen to water quality guidelines or regulations. Florida law defines a maximum allowable concentration of chlorophyll *a* and a minimum allowable concentration of dissolved oxygen in these streams. Florida has no regulatory thresholds for nitrogen or phosphorus in tidal creeks so trends are used to rate the creeks.

Water quality data are not available for the tidal portion of this creek.

## Impervious Features

Rain that falls on land that is in a natural state is absorbed and filtered by soils and vegetation as it makes its way into underground aquifers. However, in developed areas, "impervious surfaces" impede this process and contribute to polluted urban runoff entering surface waters. These surfaces include human infrastructure like roads, sidewalks, driveways and parking lots that are covered by impenetrable materials such as asphalt, concrete, brick and stone, as well as buildings and other permanent structures. Soils that have been disturbed and compacted by urban development are often impervious as well.

**35%** of the land area within the **Matheny Creek Basin** is covered by impervious

surfaces

### Land Use / Land Cover

Land use within a creek's watershed has a major effect on its water quality. In general, less development means better water quality. Land Cover/Land Use classifications categorize land in terms of its observed physical surface characteristics (e.g. upland or wetland), and also reflect the types of activity that are taking place on it (agriculture, urban/built-up, utilities, etc.). Florida uses as its standard a set of statewide classifications which were developed by the Florida Department of Transportation.
